

Smart Home

The security market is currently in a growth phase, driven by the widespread adoption of smart home concepts and increased concern for security surveillance. Consequently, related products are becoming increasingly popular. These products feature remote monitoring, video recording, internet connectivity, and other characteristics, meeting users' demands for convenience and security.

Smart Door Bell

Ennostar's Highlights

IR LED	Wavelength (nm)	850
	FoV (D)	120/150/140X120
	Optical Power (W)	0.27

- Through IR LED and sensors, the smart doorbell can capture images in dim or nighttime environments, providing clear nighttime surveillance effects, allowing users to ensure home security whether it's day or night.

- Leading the industry with high brightness by > 50% wall-plug efficiency which can save power, ensuring clear surveillance footage even in dark or low-light conditions and enhancing the reliability and performance of nighttime monitoring and security identification.
- Wide-angle solution with asymmetrical light patterns that offer 20% higher uniformity performance than competitors, providing a broader infrared illumination range and high image quality
